Protecting the Lives of your Employees

Fire Safety Training is not only a legal requirement; it also saves lives and protects businesses. The Fire Safety Order requires that fire safety training is provided to staff when they commence employment and that refresher training is provided on a regular basis.

Delivered on-line in manageable modules, our Fire Safety Awareness (FSA) course covers the most important aspects of fire safety, allowing the student to digest each piece of important information before moving on to the next module. Completed in conjunction with your own evacuation instructions, subjects include the correct use of fire extinguishers and how to attack the different types of fires, alarm bells and the different types available, interpretation of fire safety signs and fire assembly points. This essential course covers the most important fire safety subjects that are necessary to keep people alive and uninjured in an emergency situation.

FSA Fire Safety Awareness

Compliance with the Regulatory Reform (Fire Safety) Order 2005

Our Fire Safety Awareness course is delivered online in manageable modules and completed in conjunction with your own evacuation instructions. This essential course covers the most important fire safety subjects, necessary to keep people alive and uninjured in an emergency situation. Subjects include the correct use of fire extinguishers, how to attack different types of fires, interpretation of fire safety signs and fire assembly points.

Developed jointly by Quadratica UK and respected industry experts active in the Fire and Safety industry, our FSA course is compliant with the Regulatory Reform (Fire Safety) Order 2005. The Fire Safety Order requires that staff undergo fire safety training when they begin employment, and that refresher training is provided on a regular basis.

Effective health and safety management needs the commitment of all members of an organisation. To gain such commitment it is necessary to empower employees to take responsibility and recognise the positive aspects of health and safety. This essential course covers important fire safety subjects that are necessary to keep people alive and uninjured in an emergency situation.

- Roles and responsibilities in relation to fire containment and evacuation
- Recognise potential fire hazards
- Implement necessary precautions
- Correct use of different fire extinguishers
- Different alarm bells
- Understand and comply with safety signs, fire action signs, evacuation instructions and assembly points

An OSI Systems Company

Partnering with the experts

On completion, each trainee will have an understanding of fire safety training, consistent with essential fire safety policies and UK employment law.

Classroom-based training can be expensive. A certified or accredited trainer will charge the same amount whether they train just 2 or 10 of your members of staff. To this, you have to add the expense of providing a suitable training room and the costs of taking your staff offline and providing cover. If, at a later date, you need to train additional staff, you incur the same costs all over again.

By utilising the online availability of our FSA course, you can organise training around your staff's spare time. And as our FSA online courses are available 24 hours a day, 7 days a week, scheduling training for everyone at the same time is no longer a headache.

FSA course overview

Aims & Objectives: The first module covers the aims and objectives as set out by Belfast International Airport.

Fire Alarm System: This module covers automatic & manual activation of fire alarms, the fire alarm zones, the different fire alarm sounds, what happens after activation of an alarm and the correct method of calling the emergency services.

Safety Signs: The various different types of fire safety signs will be briefly explained in this module

Fire Doors & Shutters: The 4th module covers the operation and awareness of manual & automatic fire doors and roller shutters

Understanding Fire Action Signs: The Fire Action signs are explained with reference to the instructions displayed on them.

Refuge Points: The refuge points around the terminal for those with restricted mobility are laid out and illustrated

Exiting the Building: Instructions as to exiting the building under emergency conditions are explained

Fire Assembly Points: All the emergency fire assembly points are laid out and illustrated.

Evacuation Plan: This module gives a brief explanation of the evacuation plan, where you can find it and what you should do

Fire Extinguishers: With the aid of video clips, the various different types of fire extinguishers are explained and the different kinds of fires they can be used to extinguish.

Course Summary: The final module is an overview of what the student should have learned throughout the course.

The Learning Academy

Do you want the best training possible?

The Learning Academy provide the best on-line training systems in the world. Our track record is second to none and with over 18 years of experience, the Learning Academy Team know what they're talking about. We have proven our systems are the best in market sectors such as aviation, major events and justice environments where failure is not an option.

Why do we do it?

It's simple. The team at The Learning Academy want to provide the best possible training, combined with excellent customer service. We know that being a provider of the best products and services will lead to a mutually beneficial relationship… and this is what drives us.

How do we do it?

We provide products that are second-to-none and we deliver proven technology to satisfy our customers' rigorous requirements. Our products are the best, the easiest to use, the most productive, offer the best functionality and are delivered ultimately in the most economic format with which our customers can train users resulting in the best possible outcomes.
